How to Submit Soil Sample

Use a soil probe, auger, or dig a hole with a trowel and scrape the edge of the hole to remove a sample. Tools need to be clean and not rusty. Avoid sampling when the soil is too wet or too dry.

For a small area or individual plant, obtain at least two or three samples (approx. 1 cup per sample) from different locations. For large areas, garden beds, or multiple containers at least five samples should be obtained, homogenized and then subsampled for analysis.

Place 4 cups into a zip lock plastic bag (about half way full). Clearly label the sample name & number on the outside of the bag.

How to Submit Plant Tissue Sample(s):

Remove infected leaf, stem and roots with a clean razor or scissors. Place sample in a dry paper towel in a zip lock plastic bag. 10-12 leaves or 8oz stalk is required. Clearly label.

How to Ship

Clearly label the sample name on the outside of the container and place in a suitable mailer. It is best if we receive the sample overnighted. Please print, fill out and send this form with your sample(s).

US Postal Service, Fed Ex or UPS shipping address:

Soilscape Solutions
970 W Waterfront Dr, Eureka, CA 95501
